INDEX TO SUBJECTS

A

Abstracts of papers presented at the Twenty-Sixth Annual Meeting of the Society of General Physiologists, 253

Acids, amino, behavioral responses of *Phormia regina* (Meigen) to labellar stimulation with, 74

Action potential of frog muscle, impedance of membrane and myoplasm during, 482

— potentials, computed, in *Myxicola* giant axons, and sodium and potassium currents, 361

— spectra and adaptation properties of carp photoreceptors, 401

Activation, graded, in frog muscle fibers, 424

Adaptation in ventral eye of *Limulus* is functionally independent of photochemical cycle, membrane potential, and membrane resistance, 273

— properties and action spectra of carp photoreceptors, 401

Adenosine triphosphatase activity, and calcium uptake of isolated platelet membranes, 462

Afferent taste nerve response functions, hamster, 588

Aggregation, red cell, influence of ionic composition of fluid medium, 655

Amino acids, behavioral responses of *Phormia regina* (Meigen) to labellar stimulation with, 74

Axons, *Myxicola* giant, sodium and potassium currents and computed action potentials in, 361

B

Bilayer membranes, porous lipid, chloride transport in, 809

Bladder, frog urinary, effect of hypertonic media on water permeability of, inhibition by catecholamines and prostaglandin E_1, 110

Blockage, ionic, of sodium channels in nerve, 687

Blood cells, red. *See* Erythrocytes.

C

Calcium and facilitation at two classes of crustacean neuromuscular synapses, 56

— uptake and associated adenosine triphosphatase activity of isolated platelet membranes, 462

Calcium-rich and sodium-free solutions, electrical activity of canine cardiac Purkinje fibers in, 786

Carp photoreceptors, action spectra and adaptation properties, 401

Catecholamines and prostaglandin E_1, inhibition of effect of hypertonic media on water permeability of frog urinary bladder, 110

Cell, hair, generator potentials, 619

Cells, cultured chick, and heart tissue, ion levels and membrane potential in, 89

—, red blood. *See* Erythrocytes.

—, striated muscle, leakages of sodium ions into and potassium ions out of, 222

Cesium ion, differential responses of crab neuromuscular synapses, 747

Chloride transport in human red blood cells, 185

— transport in porous lipid bilayer membranes, 809

Ciliary beating, reversed, electrophysiological control in *Paramecium*, 572

Circumvallate papillae of rat tongues, disc electrophoresis of extracts from taste buds, 290

Coding, intensity, in frog retina. Quantitative relations between impulse and graded activity, 305

Coli, taenia, and stomach, guinea pig smooth muscles, effects of rapid cooling on mechanical and electrical activities, 323

Color-vision mechanisms in peripheral retinas of normal and dichromatic observers, 125

D

Dichromatic and normal observers, color-vision mechanisms in peripheral retinas of, 125

Disc electrophoresis of extracts from taste buds located in circumvallate papillae of rat tongues, 290
Discrete waves, light-evoked and spontaneous, in ventral nerve photoreceptor of *Limulus*, 552
Dugesia tigrina (Gerard) planaria, population growth, regulation by absolute number in population, 767

E

Electrophoresis, disc, of extracts from taste buds located in circumvallate papillae of rat tongues, 290
Electrophysiological control of reversed ciliary beating in *Paramecium*, 572
Erythrocyte aggregation, influence of ionic composition of fluid medium, 655
— membranes, temperature dependence of nonelectrolyte permeation across, 727
Erythrocytes, dog, adjustment of density in vivo, 146
—, duck, response to norepinephrine and elevated extracellular potassium. Volume regulation in isotonic media, 509
—, feline, sodium transport in, 709
—, human chloride transport in, 185
—, role of surface electric charge in interactions, 638
Extracellular potassium, elevated, and norepinephrine, response of duck erythrocytes, 509
Eye, *Limulus* ventral, adaptation in, is functionally independent of photochemical cycle, membrane potential, and membrane resistance, 273

F

Facilitation and calcium at two classes of crustacean neuromuscular synapses, 56
Fibers, canine cardiac Purkinje, electrical activity in sodium-free, calcium-rich solutions, 786
—, frog muscle, graded activation in, 424
—, isolated frog muscle, tension induced by hypertonic solutions, 158
—, isolated, myofilament lattice, effect of myofilament spacing upon tension, 490
—, snake muscle, voltage-clamped, effect of glycerol treatment, 176
Frog muscle fibers, isolated, tension induced by hypertonic solutions, 158

G

Ganglionic synapse, progressive depletion of presynaptic stores, quantal mechanism of transmitter release, action of hemicholinium-3 and thiamine deprivation, 342
Giant axons, *Myxicola*, sodium and potassium currents and computed action potentials in, 361
Glycerol treatment of voltage-clamped snake muscle fibers, 176

H

Hair cell generator potentials, 619
Heart, canine, electrical activity of Purkinje fibers in sodium-free, calcium-rich solutions, 786
— tissue, chick, and cultured cells, ion levels and membrane potential in, 89
Hemicholinium-3 and thiamine deprivation, quantal mechanism of transmitter release during progressive depletion of presynaptic stores at ganglionic synapse, 342
Hypertonic media, effect on water permeability of frog urinary bladder. Inhibition by catecholamines and prostaglandin E_1, 110
— solutions, tension in isolated frog muscle fibers induced by, 158

I

Impedance of membrane and myoplasm during action potential of frog muscle, 482
Intensity coding in frog retina. Quantitative relations between impulse and graded activity, 305
Interactions, red blood cell, role of surface electric charge, 638
Isotonic media, volume regulation in, response of duck erythrocytes to norepinephrine and an elevated extracellular potassium, 509

L

Labellar stimulation with amino acids, behavioral responses of *Phormia regina* (Meigen), 74
Light-evoked and spontaneous discrete waves in ventral nerve photoreceptor of *Limulus*, 552

Limulus, ventral eye, adaptation in is functionally independent of photochemical cycle, membrane potential, and membrane resistance, 273
— ventral nerve photoreceptor, light-evoked and spontaneous discrete waves in, 552
Lipid bilayer membranes, porous, chloride transport in, 809

M

Man, peripheral retinas of normal and dichromatic observers, color-vision mechanisms in, 125
—, red blood cells, chloride transport in, 185
Membrane current flow, rapid changes of potassium concentration at outer surface of exposed single neurons during, 385
— and myoplasm, impedance during action potential of frog muscle, 482
— potential and ion levels in chick heart tissue and cultured cells, 89
— potential, photochemical cycle, and membrane resistance, adaptation in ventral eye of *Limulus* is functionally independent of, 273
— resistance, photochemical cycle, and membrane potential, adaptation in ventral eye of *Limulus* is functionally independent of, 273
Membranes, isolated platelet, calcium uptake and associated adenosine triphosphatase activity, 462
—, porous lipid bilayer, chloride transport in, 809
—, red cell, temperature dependence of nonelectrolyte permeation across, 727
Mercenaria mercenaria, photoreceptor spike responses in, 24
Molluscan visual system, neural organization, 444
Muscle cells, striated, leakages of sodium ions into and potassium ions out of, 222
— fibers, frog, graded activation in, 424
— fibers, frog, isolated, tension induced by hypertonic solutions, 158
— fibers, snake, voltage-clamped, effect of glycerol treatment, 176
—, frog, impedance of membrane and myoplasm during action potential of, 482
—, *Mytilus* resting, electrical constants of, and structure of smooth muscle, 207
—, *Mytilus* smooth, structure, and electrical constants of resting muscle, 207
Muscles, fast and slow mammalian, reinnervation of, 1
—, smooth, of guinea pig stomach and taenia coli, effects of rapid cooling on mechanical and electrical activities of, 323
Myelinated nerve, potassium channels, selective permeability to small cations, 669
Myofilament lattice: studies on isolated fibers, effect of myofilament spacing upon tension, 490
Myofilament spacing, effect upon tension. Myofilament lattice: studies on isolated fibers, 490
Myoplasm and membrane, impedance during action potential of frog muscle, 482
Mytilus smooth muscle, structure, and electrical constants of resting muscle, 207
Myxicola giant axons, sodium and potassium currents and computed action potentials in, 361

N

Nerve, ionic blockage of sodium channels in, 687
—, *Limulus* ventral photoreceptor, light-evoked and spontaneous discrete waves in, 552
—, myelinated, potassium channels, selective permeability to small cations, 669
—, taste, hamster afferent response functions, 588
Neural organization of a molluscan visual system, 444
Neuromuscular synapses, crab, differential responses to cesium ion, 747
— synapses, crustacean, calcium and facilitation at two classes of, 56
Neurons, exposed single, rapid changes of potassium concentration at outer surface during membrane current flow, 385
Nonelectrolyte permeation across red cell membranes, temperature dependence, 727
Norepinephrine and elevated extracellular potassium, response of duck erythrocytes, 509

P

Papillae, circumvallate, of rat tongues, disc electrophoresis of extracts from taste buds, 290
Paramecium reversed ciliary beating, electrophysiological control, 572

Peripheral retinas of normal and dichromatic observers, color-vision mechanisms in, 125
Permeability, selective, of potassium channels in myelinated nerve to small cations, 669
—, water, of frog urinary bladder, effect of hypertonic media. Inhibition by catecholamines and prostaglandin E_1, 110
Permeation, nonelectrolyte, across red cell membranes, temperature dependence, 727
Phormia regina (Meigen), behavioral responses to labellar stimulation with amino acids, 74
Photochemical cycle, membrane potential, and membrane resistance, adaptation in ventral eye of *Limulus* is functionally independent of, 273
Photoreceptor, *Limulus* ventral nerve, light-evoked and spontaneous discrete waves in, 552
— spike responses in hardshell clam, *Mercenaria mercenaria*, 24
Photoreceptors, carp, action spectra and adaptation properties, 401
Planaria *Dugesia tigrina* (Gerard), population growth, regulation by absolute number in population, 767
Platelet membranes, isolated, calcium uptake and associated adenosine triphosphatase activity, 462
Population growth in planaria *Dugesia tigrina* (Gerard), regulation by absolute number in population, 767
Potassium channels in myelinated nerve, selective permeability to small cations, 669
— concentration, rapid changes at outer surface of exposed single neurons during membrane current flow, 385
—, elevated extracellular, and norepinephrine, response of duck erythrocytes, 509
— ions, leakages out of, and sodium ions into striated muscle cells, 222
— and sodium currents and computed action potentials in *Myxicola* giant axons, 361
Presynaptic stores, progressive depletion at ganglionic synapse, quantal mechanism of transmitter release, action of hemicholinium-3 and thiamine deprivation, 342
Prostaglandin E_1 and catecholamines, inhibition of effect of hypertonic media on water permeability of frog urinary bladder, 110
Purkinje fibers, canine cardiac, electrical activity in sodium-free, calcium-rich solutions, 786

Q

Quantal mechanism of transmitter release during progressive depletion of presynaptic stores at ganglionic synapse. Action of hemicholinium-3 and thiamine deprivation, 342

R

Red blood cells. *See* Erythrocytes.
Reinnervation of fast and slow mammalian muscles, 1
Retina, frog, intensity coding in, quantitative relations between impulse and graded activity, 305
Retinas, peripheral, of normal and dichromatic observers, color-vision mechanisms in, 125

S

Single neurons, exposed, rapid changes of potassium concentration at outer surface during membrane current flow, 385
Skin, isolated frog, influence of transepithelial potential difference on sodium uptake at outer surface of, 529
Smooth muscle, *Mytilus*, structure, and electrical constants of resting muscle, 207
— muscles of guinea pig stomach and taenia coli, effects of rapid cooling on mechanical and electrical activities, 323
Sodium channels, ionic blockage in nerve, 687
— ions, leakages into, and potassium ions out of striated muscle cells, 222
— and potassium currents and computed action potentials in *Myxicola* giant axons, 361
— transport in feline red cells, 709
— uptake at outer surface of isolated frog skin, influence of transepithelial potential difference, 529
Sodium-free and calcium-rich solutions, electrical activity of canine cardiac Purkinje fibers in, 786
Spectra, action, and adaptation properties of carp photoreceptors, 401
Stomach and taenia coli, guinea pig

smooth muscles, effects of rapid cooling on mechanical and electrical activities, 323
Striated muscle cells, leakages of sodium ions into and potassium ions out of, 222
Synapse, ganglionic, progressive depletion of presynaptic stores, quantal mechanism of transmitter release, action of hemicholinium-3 and thiamine deprivation, 342
Synapses, crab neuromuscular, differential responses to cesium ion, 747
—, crustacean neuromuscular, calcium and facilitation at two classes of, 56

T

Taenia coli and stomach, guinea pig smooth muscles, effects of rapid cooling on mechanical and electrical activities, 323
Taste buds located in circumvallate papillae of rat tongues, extracts from, disc electrophoresis, 290
— nerve response functions, hamster afferent, 588
Thiamine deprivation, and hemicholinium-3, quantal mechanism of transmitter release during progressive depletion of presynaptic stores at ganglionic synapse, 342
Tongues, rat, disc electrophoresis of extracts from taste buds located in circumvallate papillae of, 290
Transepithelial potential difference, influence on sodium uptake at outer surface of isolated frog skin, 529
Transmitter release, quantal mechanism during progressive depletion of presynaptic stores at ganglionic synapse. Action of hemicholinium-3 and thiamine deprivation, 342
Triphosphatase activity, adenosine, and calcium uptake of isolated platelet membranes, 462

U

Uptake, calcium, and associated adenosine triphosphatase activity of isolated platelet membranes, 462
—, sodium, at outer surface of isolated frog skin, influence of transepithelial potential difference, 529
Urinary bladder, frog, effect of hypertonic media on water permeability of, inhibition by catecholamines and prostaglandin E_1, 110

V

Vision, color-, mechanisms in peripheral retinas of normal and dichromatic observers, 125
Visual system, molluscan, neural organization, 444
Voltage-clamped snake muscle fibers, effect of glycerol treatment, 176
Volume regulation in isotonic media, response of duck erythrocytes to norepinephrine and an elevated extracellular potassium, 509

W

Water permeability of frog urinary bladder, effect of hypertonic media. Inhibition by catecholamines and prostaglandin E_1, 110
Waves, light-evoked and spontaneous discrete, in ventral nerve photoreceptor of *Limulus*, 552
